INVESTMENT STRATEGY

This UCITS is actively managed on a discretionary basis. Its investment objective is to provide a return net of expenses linked to the evolution of gold mining and commodity related stocks, without any constraints, through selective management of gold and natural resources stocks, over the recommended investment horizon. A benchmark index is not required for this type of management strategy, in which the manager is allowed flexibility in asset allocation. Nevertheless, the performance of the UCITS may be compared with that of a benchmark index such as the NYSE ARCA GOLD MINERS Index.

## DEFINITIONS OF EXTRA-FINANCIAL TERMS

Crédit Mutuel Asset Management's proprietary ESG analysis model uses a tool to assess the risks and opportunities related to the environmental and social transitions of the issuers making up the portfolio. The analysis of issuers covers five main pillars: environmental, social, societal, governance and the company's commitment to a socially responsible approach. A rating is then calculated based on three components (environment, social and governance), which enables us to position the portfolio in terms of ESG. The exercise of voting rights and dialogue with issuers round out our responsible investor approach.

Environmental Sustainability: the first factor of La Française's ESG model assesses companies' performance and strategies for reducing the environmental impacts of their operations and wider value chain.

Human Capital: the second factor of the ESG model assesses companies' policies, programs and performance to manage and develop their workforce.

Organisational Sustainability: the third factor of the ESG model assesses the quality of companies' corporate governance practices and their management of stakeholder relations (e.g. suppliers).

Carbon Intensity: The carbon intensity of a company is calculated as the ratio between the volume of greenhouse gas (GHG) emissions of the company in tonnes of CO2eq and the turnover.

Carbon Footprint: carbon indicator of the financed emissions of companies in our portfolio in tons of CO2 per million EUR invested. The CO2 calculation model is provided by La Française, based on data provided by CDP. It covers scopes 1 and 2. The calculation is the following:  $\sum (i \text{ to } n) (\text{investment } i / \text{Enterprise value}) / (\text{Current portfolio value}) \times \text{Issuer's emissions } i$
