Effective July 16, 2025, the La Française Rendement Global 2025 sub-fund will change its name to La Française Rendement Global 2031 to reflect a change in its management objective and investment strategy.

## INVESTMENT STRATEGY

The sub-fund's objective is to achieve, over the recommended investment period from the sub-fund's launch date until the maturity date of 31 December 2031, a net return, after fees, that exceeds that of French government bonds due 2031 denominated in EUR (OAT 0% due 25 November 2031 - ISIN code FRO014002WK3). The potential profitability of the sub-fund comes from the value of the accrued coupons of the bonds in the portfolio and the variations in capital due to the fluctuation in interest rates and credit spreads. The management objective is based on market conditions at the time the fund is opened and is only valid in the event of subscription at that time. In the event of subsequent subscriptions, performance will depend on the prevailing market conditions at the time of such subscriptions. These conditions cannot be anticipated and could therefore lead to a different performance.

## DEFINITIONS

*The synthetic risk indicator makes it possible to assess the level of risk of this product compared to others. It indicates the likelihood of this product incurring losses in the event of market developments or our inability to pay you.*

*Volatility is a measure for the strength of fluctuation in the performance of the fund during a certain period. The higher it is the more volatile and therefore risky a fund is.*

*The Sharpe Ratio measures the average return earned in excess in dependency of the risk relative to a benchmark (risk-free rate). For the assessment of this key figure, the attainable riskfree yield is subtracted from the yield actually earned. The result is divided by the risk that has been taken by the fund. A Sharpe Ratio > 1 indicates that an excess yield compared to the riskfree money market investment has been earned. At the same time, it shows the ratio of this excess yield to the risk taken. In reverse, a negative Sharpe Ratio (<0) illustrates that the money market interest rate has not been outperformed.*

*Max.Drawdown: Historical maximum loss that would have been incurred by an investor who invested at the highest and exited at the lowest*

*The recovery is the time needed to recover the maximum loss (max drawdown).*

*Modified duration: makes it possible to measure the percentage change, upward or downward, of the price of a bond or of the net asset value of a bond UCITS, induced by a 1% fluctuation of market interest rates.*

*Average spread: weighted average of the bond spread in the portfolio. For a bond, it represents the difference between the actuarial rate of return and that of a risk-free loan of identical duration. If the creditworthiness of the issuer is perceived to be good, the spread is naturally lower. Calculated on the bond portfolio.*
