Administrator : BNP Paribas SA
Management company : La Française Asset Management
Portfolio Manager(s) : Akram GHARBI, Aurore LE CROM, Delphine CADROY, Victoire DUBRUJEAUD

INVESTMENT STRATEGY

The UC1, classified as "Bonds and other international debt securities", has the management objective of obtaining, over the recommended investment period of 3 years, a performance net of fees, superior to that of the BofA BB index. Global High Yield by investing in a portfolio of issuers previously filtered according to ESG criteria and of which at least 60% contribute positively and/or do not present a negative contribution to the SDGs.

POSITIVE CONTRIBUTION TO THE SDGS

Issuers having obtained a SDGs score strictly greater than 0 and up to +10

DEFINITIONS OF EXTRA-FINANCIAL TERMS

ESG score : the ESG score measures the overall ESG quality of a company. It is calculated as a weighted-average of the three factor scores (ES, HC and OS) using sector-specific weights. The ESG scoring of the investment universe is automated and allows for adjustments to reflect additional information available to the ESG analysts as appropriate.

Environmental Sustainability : the first factor of La Française's ESG model assesses companies' performance and strategies for reducing the environmental impacts of their operations and wider value chain.

Human Capital : the second factor of the ESG model assesses companies' policies, programs and performance to manage and develop their workforce.

Organisational Sustainability : the third factor of the ESG model assesses the quality of companies' corporate governance practices and their management of stakeholder relations (e.g. suppliers).

Carbon Impact Score: The Carbon Impact score is calculated as a simple average of indicators for each category of the TCFD (Task Force on Climate-Related Financial Disclosures) at company level, and can be adjusted to reflect additional information available to the ESG analysts as appropriate.

Carbon Intensity: The carbon intensity of a company is calculated as the ratio between the volume of greenhouse gas (GHG) emissions of the company in tonnes of CO2eq and the turnover.

Carbon Footprint : carbon indicator of the financed emissions of companies in our portfolio in tons of CO2 per million EUR invested. The CO2 calculation model is provided by La Française, based on data provided by CDP. It covers scopes 1 and 2. The calculation is the following : $\sum (i \text{ to } n) (\text{investment } i / \text{Enterprise value}) / (\text{Current portfolio value}) \times \text{Issuer's emissions } i$

SDG alignment objective: 60% minimum of the net assets of issuers contributing positively and/or presenting no negative contribution to the SDGs, i.e. issuers having obtained a score strictly greater than 0 and up to +10

Important information for investors in Singapore

The fund is not authorised under Section 286 of the Securities and Futures Act (Cap. 289) ("SFA") or recognised under Section 287 of the SFA, and the Fund is not permitted to be offered to the public. This material and any other document issued in connection with the offering or sale of Units is not a prospectus as defined in the SFA and will not be filed or registered as a prospectus with the Monetary Authority of Singapore. Legal liability under the SFA for the content of prospectuses does not apply. No offer or invitation to subscribe or purchase units may be made, nor may any document or other material (including, but not limited to, such material) relating to the Fund may be disseminated or distributed – directly or indirectly – to any person in Singapore other than an institutional investor (as defined in Section 4A of the SFA) in accordance with Section 304 of the SFA. When an offer is made to institutional investors in accordance with Article 304 of the SFA, certain restrictions may apply to the shares acquired under such an offer.

The SRI-Label does not guarantee the fund's financial performance.

All the codes of transparency, voting and commitment policies, as well as the sustainable investment charter are available on the La Française Group website (<https://www.la-francaise.com/en/regulatory-information/>)

Manager: Current management team, subject to change with time.

Issue rating: corresponds to the most recent issue rating between S&P and Moody's or, failing that, of the issuer.

Issuer rating: corresponds to the most recent issuer rating between S&P and Moody's.

The management company does not exclusively or mechanically use the ratings established by rating agencies and performs its own credit analysis. Ratings are determined on a case-by-case basis on the basis of an internal methodology and are subject to change.

SFDR Classification : The Sustainable Finance Disclosure Regulation aims to direct capital flows towards more responsible investments, to ensure transparency, consistency and quality of information for investors and thus to allow a comparison of the different investment vehicles.

It applies to all financial market players but also to products.

3 categories of products:

1/ Automatically all funds are classified in Article 6, without sustainability objective.

2/ Article 8 applies for funds that promote ESG characteristics.

3/ Article 9 goes further, with a sustainable and measurable investment objective. That is, the funds invest in an activity that contributes to an environmental or social objective, such as reducing CO2 emissions or fighting inequality.

DEFINITIONS

The synthetic risk indicator makes it possible to assess the level of risk of this product compared to others. It indicates the likelihood of this product incurring losses in the event of market developments or our inability to pay you.

Volatility is a measure for the strength of fluctuation in the performance of the fund during a certain period. The higher it is the more volatile and therefore risky a fund is.

The Sharpe Ratio measures the average return earned in excess in dependency of the risk relative to a benchmark (risk-free rate). For the assessment of this key figure, the attainable riskfree yield is subtracted from the yield actually earned. The result is divided by the risk that has been taken by the fund. A Sharpe Ratio > 1 indicates that an excess yield compared to the riskfree money market investment has been earned. At the same time, it shows the ratio of this excess yield to the risk taken. In reverse, a negative Sharpe Ratio (<0) illustrates that the money market interest rate has not been outperformed.

Max.Drawdown: Historical maximum loss that would have been incurred by an investor who invested at the highest and exited at the lowest

The recovery is the time needed to recover the maximum loss (max drawdown).

Modified duration: makes it possible to measure the percentage change, upward or downward, of the price of a bond or of the net asset value of a bond UCITS, induced by a 1% fluctuation of market interest rates.

Credit sensitivity : is expressed for a 100 bp variation of credit spread.

Discount margin : is the average expected return of a floating-rate bond that's earned in addition to the index underlying. The size of the discount margin depends on the price of the floating- or variable-rate bond.
